

AutoRek

Product Guide

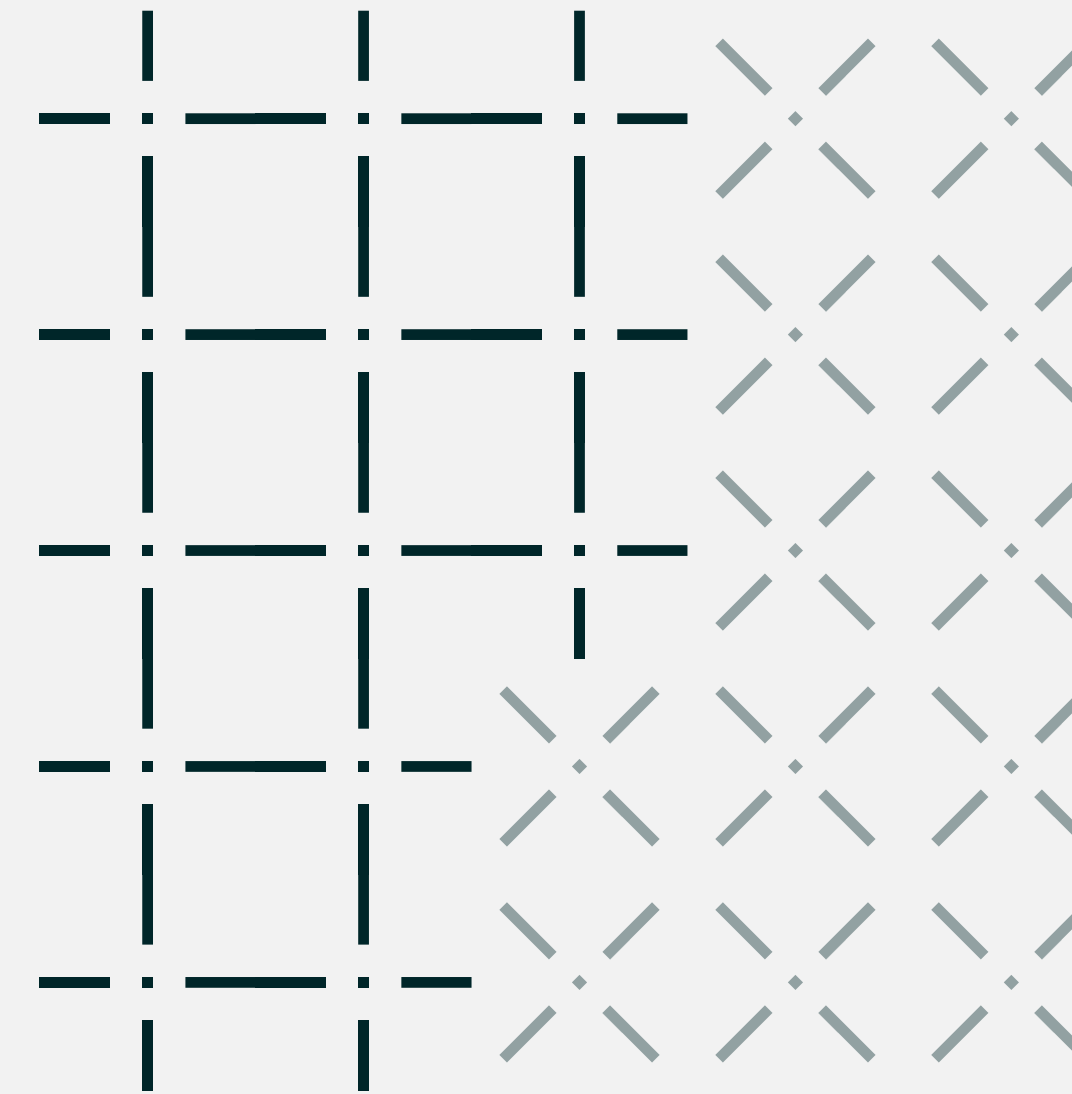

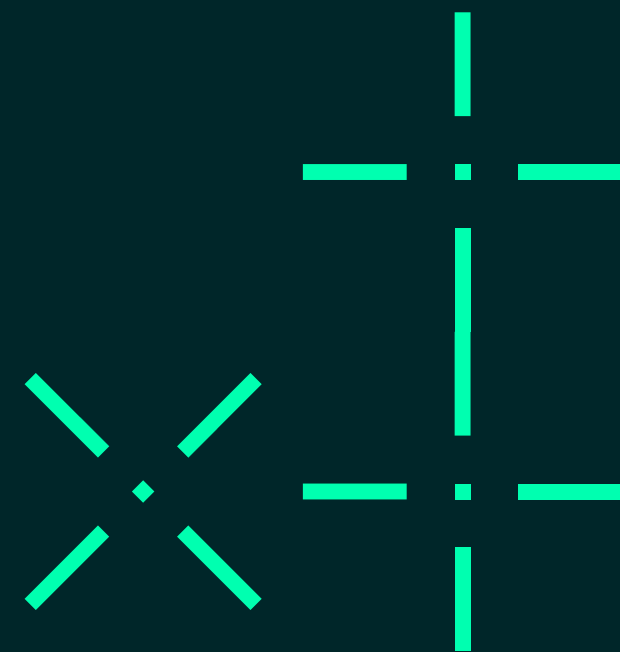

AutoRek

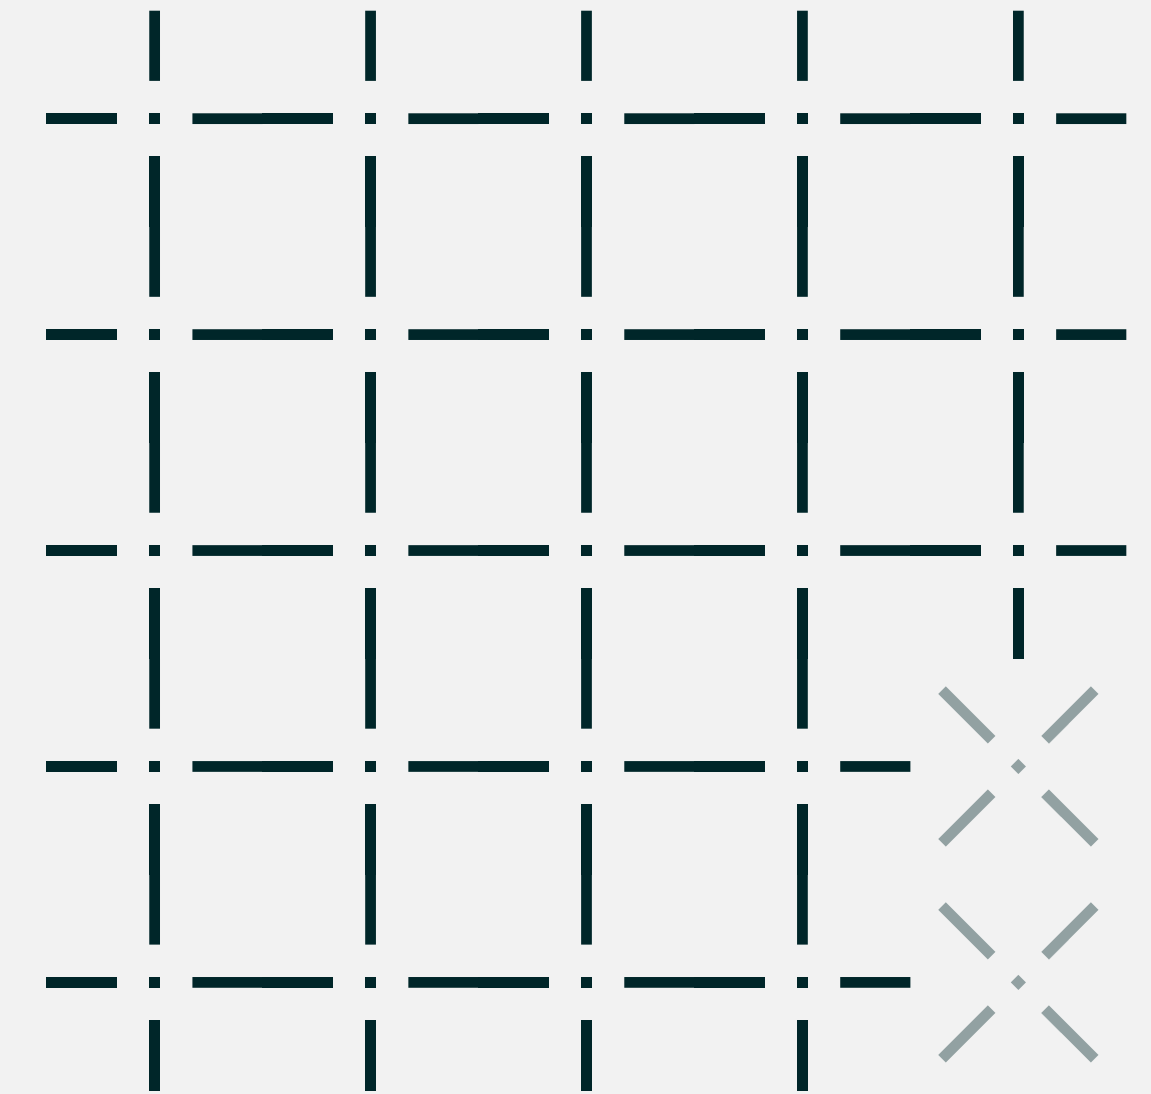

What is AutoRek?

AutoRek is an end-to-end financial controls platform that automates reconciliations, data management, and reporting.

Trusted by the biggest names in global finance for 30 years, we automate reconciliations and reporting from end to end.

50%+
reduction in operational costs

90%+
less time spent on reconciliations

Asset Management clients
have over

\$6.5 Trillion

in AUM (assets under
management)

Insurance clients
have over

\$1.3 Billion

in GWP (gross written
premium)

Payment clients
have over

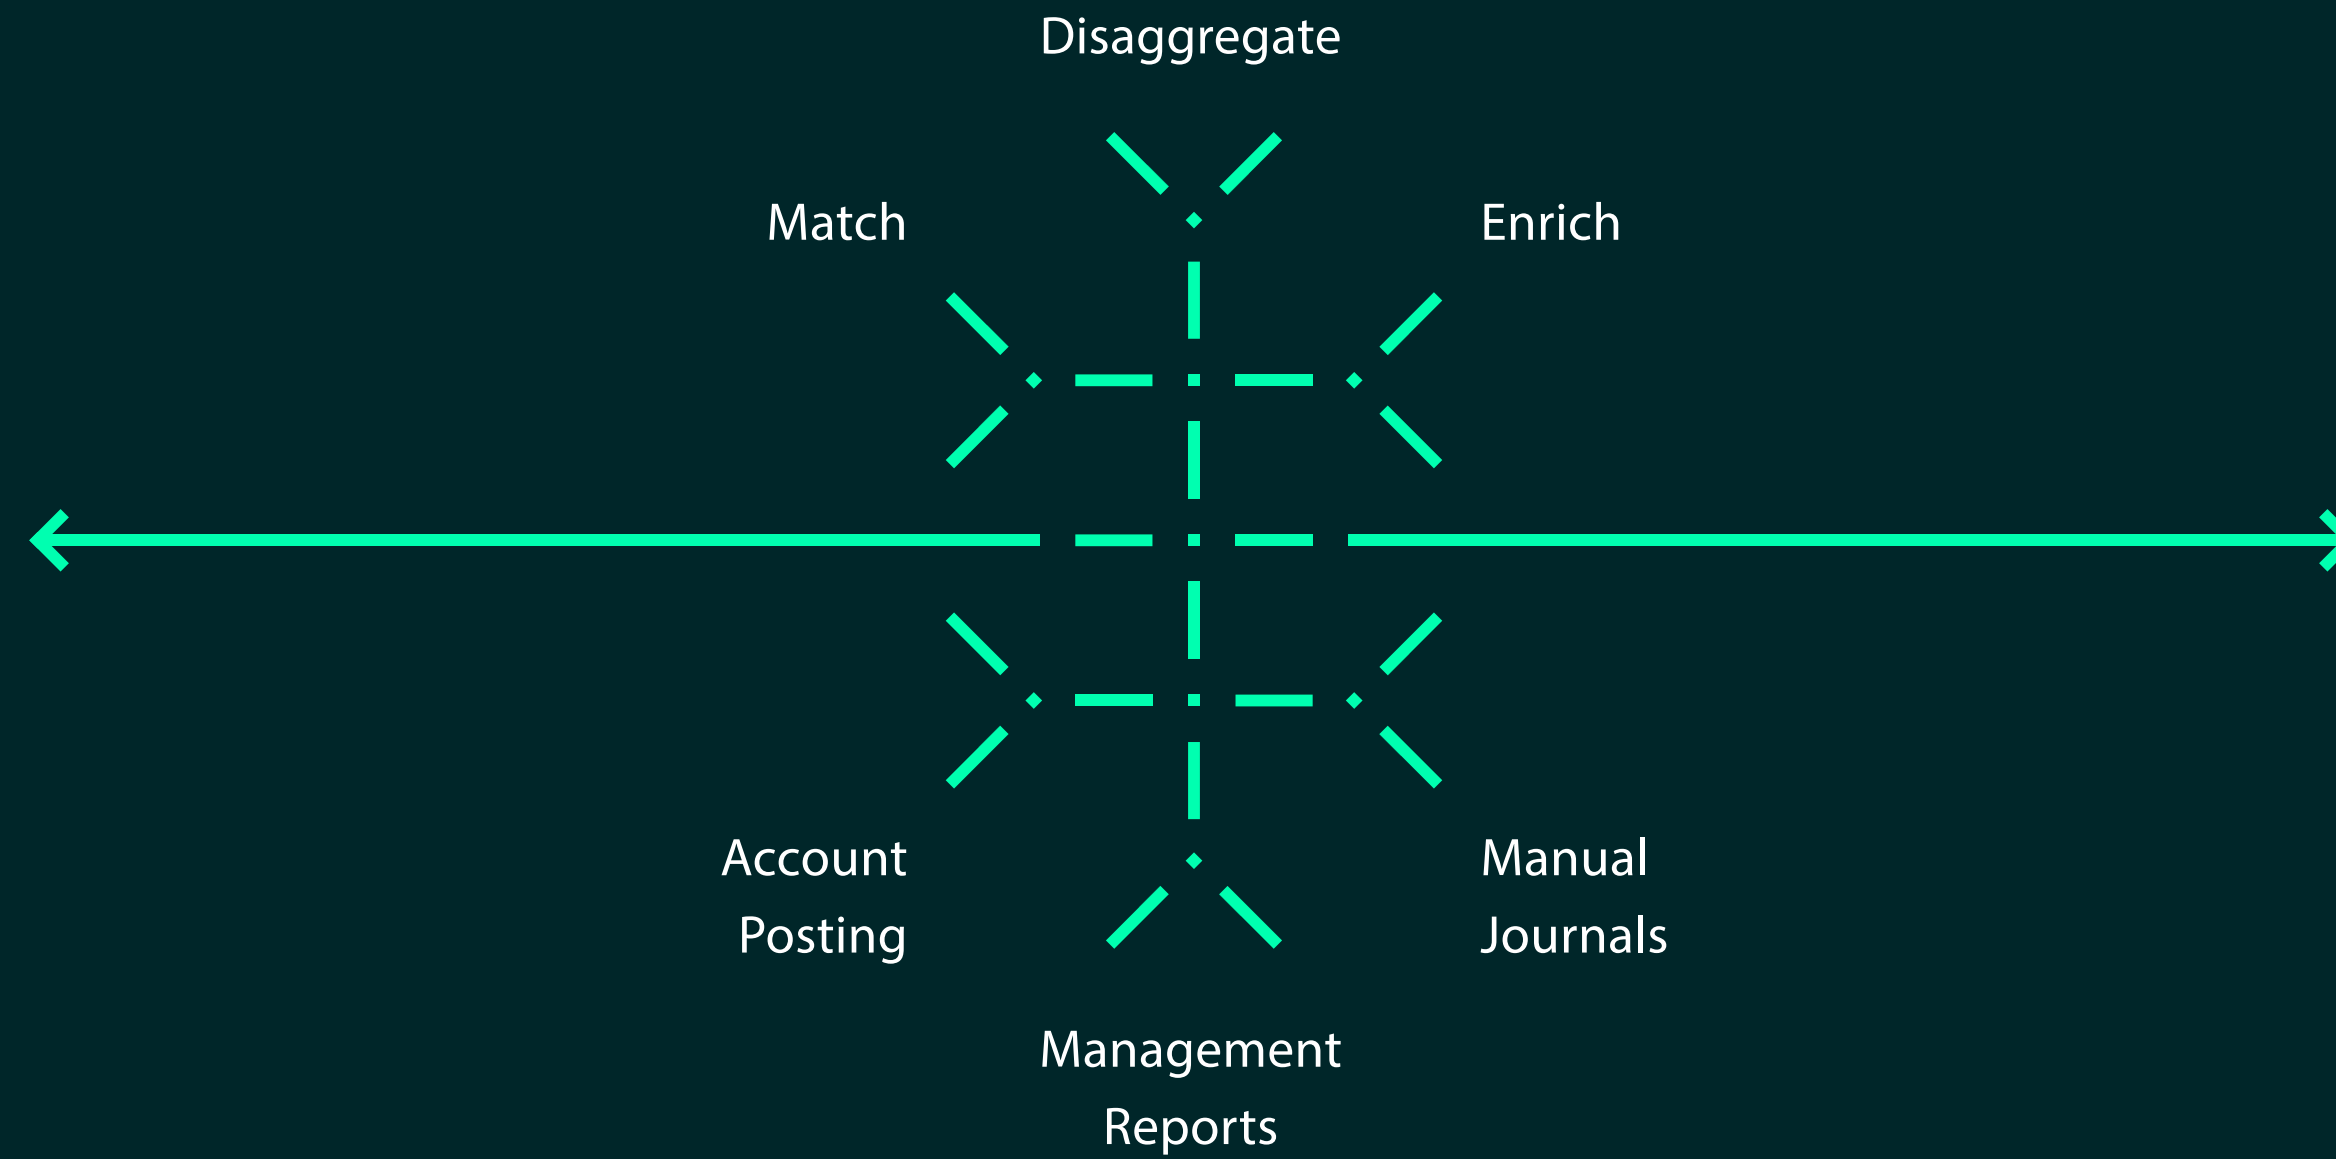

\$4 Trillion

in annual
transactions

Solution overview

Any Data Source

- Ledger System
- Swift Messages
- Front-Office Systems
- Client Data
- Custodian Statements
- Business Units
- API Feeds
- PDF Documents
- Spreadsheets

Output

- Internal & External Reconciliations
- Financial Reporting
- Regulatory Reporting
- Workflow & Exception Case Management
- Attestation Tracking
- Financial Control Dashboard
- Audit Dashboards & Drilldown
- Fast Close

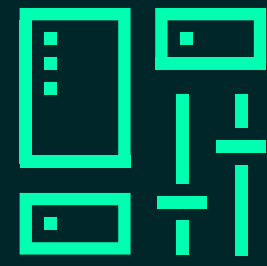

Why AutoRek?

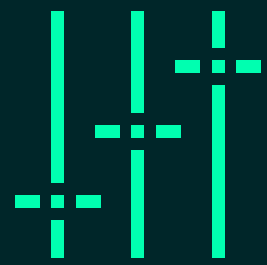

Our solution empowers financial organisations to:

Maximise performance

Simplify the management of complex data

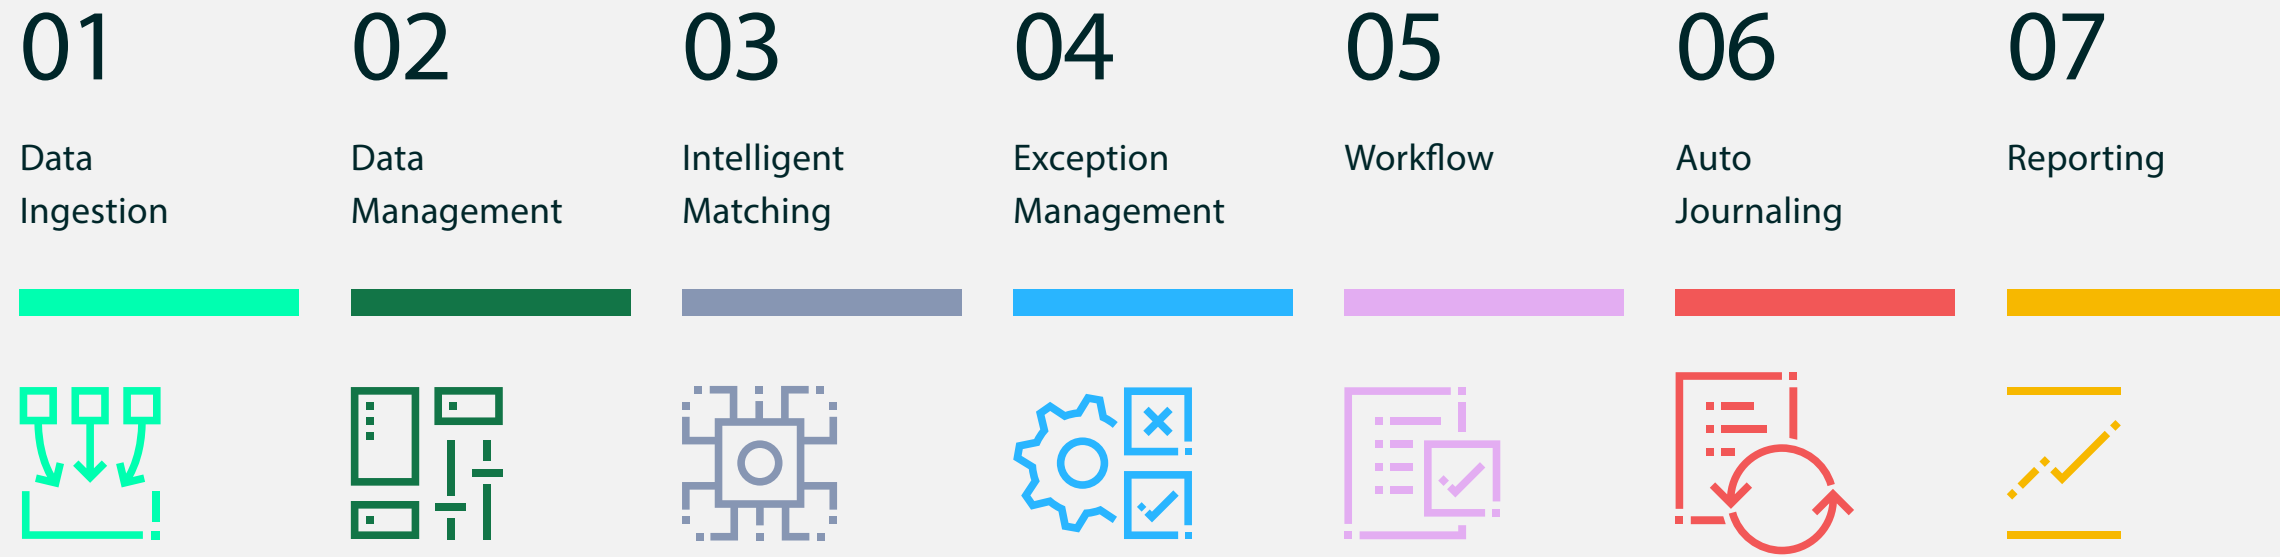

Streamline back-office operations

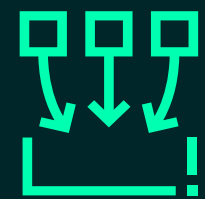

Comply with regulations

Our solution in 7 steps

We reconcile financial data through the following steps:

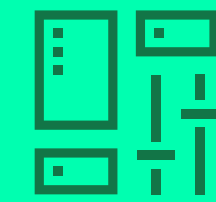

01 Data Ingestion

Solution overview

The first step is data ingestion, where we integrate with data from any source and in any format. The platform will take your data in its original format, removing the need for any preparation prior to loading.

Features

- Consume data in any format including flat-files, SWIFT, ISO 20022, MS Excel, ACH, JSON, OLE/ODBC and PDF
- Multiple options available for the delivery of data to AutoRek, including SFTP/File System, Messaging and Cloud Store

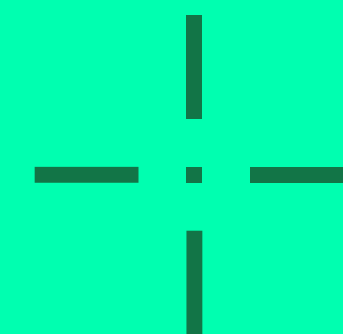

02 Data Management

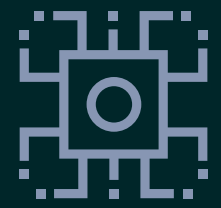

Solution overview

Once data is loaded, AutoRek provides multiple options for ordering, validation, normalisation, filtering, and deduplication to enhance the reconciliation performance.

Features

- Consolidate detailed transactions to create an aggregated position
- Enrich raw data with additional sources of information
- Disaggregate bulk entries into underlying transactional records
- Standardise multiple data sources into a single usable schema
- Apply calculation rules to source records to enrich with additional data points

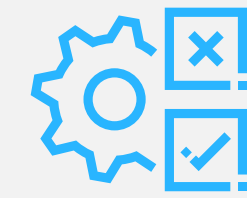

03 Intelligent Matching

Solution overview

Intelligent matching is the heart of the reconciliation process. It is at this stage that data sources are matched or identified as exceptions that need to be investigated and accounted for.

Features

- Configurable match rules
- One-to-one, one-to-many and many-to-many match sequencing
- Suggest match functionality
- Tolerance matching
- Attribute comparison matching to compare a large number of datapoints across multiple records
- High speed matching for large volumes

04 Exception Management

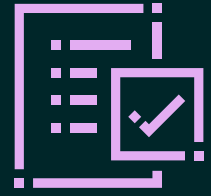

Solution overview

AutoRek provides a range of features to assist users in the investigation and management of exceptions. A full audit trail of all actions is retained on the platform to demonstrate the lifecycle of each transaction.

Features

- Integrated workflow to assign, route and escalate exceptions
- Apply break commentary with latest status
- File attachment to help evidence ongoing investigation
- Automated label functionality for immediate categorisation of exceptions
- Full audit trail to trace a transaction's history

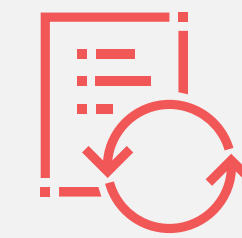

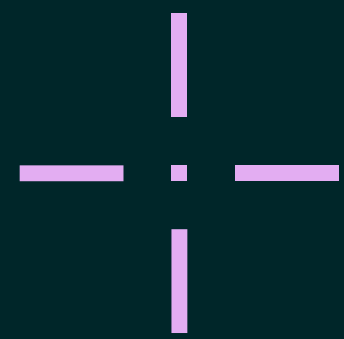

05 Workflow

Solution overview

Escalation, sign-off and approval processes are performed in AutoRek using integrated workflow and case creation logic.

Features

- Centralised sign-off with all approvals and rejections evidencable
- Automatic escalation of exceptions based on defined logic (e.g. ageing, value)
- End-of-day approval to confirm completion of process
- Clear visibility of ownership and status of all workflow items
- Maintain separation of duties
- Create and enforce sign-off hierarchies

06 Auto Journalling

Solution overview

This step is designed to document the accounting impact of the reconciliation with associated journal entries. AutoRek will automatically create journal entries based on reconciliation data, for example calculation results or the unmatched record set, and provide an output to be ingested directly into source systems.

Features

- Integrated journal generation that are easily exportable to ERP/general ledger
- Automatically create journals for rounding differences, tolerance write-offs, currency differences and sales taxes
- Stored logic used to determine credit/ debit entries
- Supports multi-period, multi-currency and multi-company subledger posting controls
- Journal entry with audit trails tied to the reconciliation

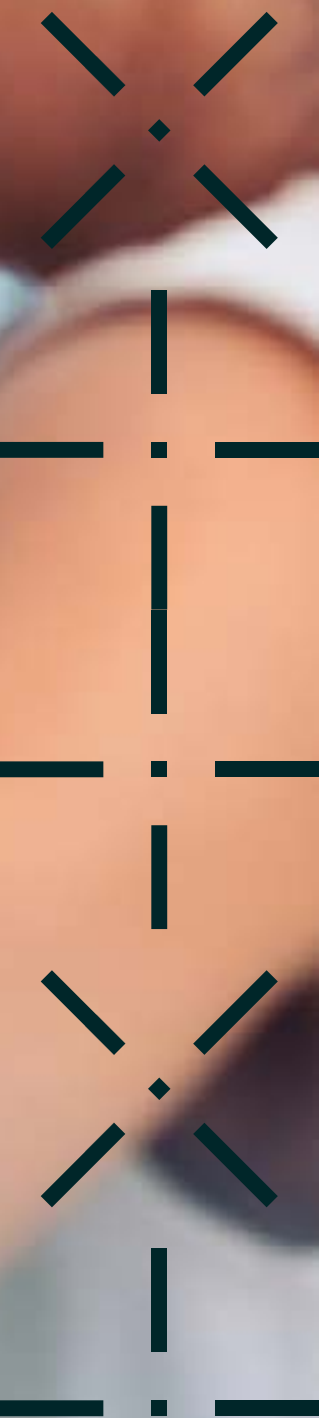

07 Reporting

Solution overview

AutoRek provides real-time dashboards to surface key reconciliation metrics from underlying processes. Full reporting capability is also provided with use of SQL Server Reporting Services to generate reports for accounting, regulatory and operational purposes.

Features

- Real-time, interactive dashboards to highlight key reconciliation MI
- Drill down and drill around functionalities to focus investigation
- Formal reporting to snapshot and evidence completion of business processes
- Full data lineage maintained throughout the entire process
- Unified database for reporting purposes
- Automatic or scheduled report generation and export capability

Use Cases

External Reconciliations

Bank, Payments, Payables, Receivables,
Cash Allocation, Statements/Remittance,
Trade, Stock

Internal Reconciliations

Balance Sheet, Intersystem,
Intercompany, Data Warehouse

Accounting

Sub Ledger, General Ledger
Reconciliations, Attestation, Credit
Control, Client Accounts & Balances

Regulatory

CASS 5, CASS 6, CASS 7, Payments
Safeguarding, Solvency II, MiFID II,
Structured Regulatory Reporting

Financial Controls

Data Control

Efficiency

Governance

Audit

Workflow

Attestation

The flexibility of AutoRek means that we can tailor solutions to meet a range of unique requirements across the breadth of financial operations.

Our default offering to new clients is a public cloud SaaS model, hosted & maintained by AutoRek, in Microsoft Azure. Clients who are unable to adopt a SaaS model can install & run AutoRek on premises or in a private cloud.

AutoRek SaaS

01 Built on Microsoft Azure - a market leading Saas platform

Native Azure resource, with full geographic coverage and market leading Saas services

02 Capacity Management

Pro active analysis of consumption using MS Azure monitoring. Regular review of performance in line with aspirations

03 Resilience

99.99% dual region highly available service. RPO 5 Secs. RTO 1 Hour. 15 Day Point In Time Restore. Long term data retention (27 Years)

04 Application Support

24*7 App support specialists that understand your implementation. Rapid escalation to relevant SMEs

05 Platform Support

Specialist AutoRek cloud operations engineering teams responsible for deploying, architecting and maintaining the virtual resources that support customer SaaS environments

06 Security Management

Natively instrumented a SIEM tool managed by a 24/7 SOC

07 Service Delivery Management

Assigned Service Delivery Mangers who understand each aspect of that service; escalation management & continuous improvement

08 Observability

24*7 instrumentation feeding monitoring dashboards and alerting rules

09 Release Management

Managed pipelines to deploy and upgrade core product as and when new releases become available

10 Configuration Management

Code driven pipeline of AutoRek Config management

11 Compliance

Leveraging MS Azure existing suite of standards -based certifications. AutoRek certifications ISO / SOC II

12 Corporate & Social Responsibility

Microsoft is a market leader in delivering sustainability in infrastructure
