

"Most tools are either strong on transactional reconciliations or on balance substantiation, but rarely both. AutoRek does both well and integrates them seamlessly into our Microsoft Azure-first strategy."

Richard Draper, Head of Finance Operations, ClearBank

Highlights

AutoRek transforms reconciliation from a bottleneck into a business enabler.

AutoRek's availability in Microsoft Marketplace helps clients simplify billing.

AutoRek features cloud-native deployment via Microsoft Azure.

About partner

AutoRek delivers intelligent automation for financial data management, giving firms the clarity, control, and confidence to grow in complex, high-volume, and regulated environments.

AutoRek on Microsoft Azure streamlines reconciliation to power scalable growth for financial services firms

The challenge

As businesses grow, their finance operations often evolve into a fragmented, inefficient system that cannot keep up with increasing demands. ClearBank needed a solution that would eliminate silos, reduce risk, improve efficiency, and enable end-to-end reconciliation capabilities suitable for a fast-scaling digital bank.

The solution

AutoRek eliminates silos, reduces risk, and enables end-to-end reconciliation capabilities suitable for fast-scaling financial operations. By automating routine tasks, AutoRek enabled ClearBank's team to focus on strategic, value-added tasks — supporting expansion without the need to increase headcount.

The results

- AutoRek handles millions of transactions across multiple schemes and counterparties without performance issues. Additionally, AutoRek flags issues automatically and routes them into workflows or CRM systems for fast investigation.
- Because AutoRek is available on Azure, it contributes to ClearBank's committed cloud spend, helping drive down unit costs while maintaining architectural consistency. "Being able to procure AutoRek via the Microsoft Marketplace was a clear win for ClearBank," said Mira Bhadresha, Head of Procurement & Outsourcing, ClearBank.
- AutoRek's data handling and no-code configurability allow ClearBank to onboard new reconciliation routines and clients quickly. This is critical for product launches like digital asset services.
